

Design an End to End Enterprise **Azure Cloud** and **DevSecOps** Architecture with Governance, Hierarchy, IAM, Networking, Compute, backup, DR, Security, Cost Optimization, Best practices, Monitoring, High Availability, Scalability, Reliability

- What is Azure Landing Zone?
- What is DevSecOps?
- What Security Check should run before deployment?
 - Synk, checkov, tfsec, gitleaks, trufflehog, trivy, blackduck, prisma, chefinspect, tfint, superlinter, sonarqube, terracost, terrascan, vstest
- How do you secure Terraform?
 - StateLocking, Least Privilege, Child Parent modules, Pull Requests
- How do you secure secrets in terraform?
 - Using Keyvault
- Which DevSecops tools you have used in your project?
- Explain Zero trust security in Azure?
- How do you secure azure landing zone?

- How do you manage compliance and governance of Azure Landing Zone?
 - Sentinel, Azure Policy etc..
- Explain the complete devsecops pipeline
 - Clone, Create feature branch, push code, check plan in pipeline and check scan reports, raise PR, get reviews, merge PR to main, pipeline run from main, do plan, scan and runs apply
- As an architect, what are your primary responsibilities

HandsOn, Screen Share karke draw.io pr teach, Mock interviews, Market me fail hona start krna hai resume banake
